

In-house exhibition at KoCoS in Korbach, Germany

As international business leaders travelled to Hanover for the "the world's leading industrial show", visitors from all over the world flocked to the German town of Korbach for a closer look at some of the latest innovations in electrical and optical metrology. The KoCoS group invited customers, partners and other interested parties to an in-house "meet & greet" exhibition at their headquarters from 24 to 28 April 2017.

KoCoS develops, manufactures and sells measuring and test systems for equipment in electricity supply systems and laser-optical inspection systems for quality monitoring in the semi-conductor, automobile and food industries. Professional competence, productivity and innovation are the foundations on which the KoCoS group is built.

Industry 4.0 and the power systems of tomorrow were recurring themes during the daily schedule of hands-on product demonstrations and talks presenting the latest innovations in power quality measurement, protection relay testing, digital fault recording and circuit breaker testing. Multi-media displays and live demonstrations effectively highlighted

Jérôme and Florent Mecca (Consult-Elect., France)
Thomas Becker (CEO KoCoS Messtechnik AG, Germany)

the excellent functionality provided by KoCoS products and gave visitors a unique opportunity to take a close look at the whole product range.

Live demonstrations of the electrical and optical factory test systems and presentations of the services which KoCoS provides in the areas of servicing and engineering were also of special interest.

The large number of visitors and the friendly atmosphere at this innovative and very unique KoCoS in-house exhibition showed that Hanover is not the only place to go in order to see new technologies presented successfully.
