

Syste	m
concei	рt

High-precision, portable stand-alone test systems for function tests on various types of switchgear device, including circuit breakers, disconnectors or earthing switches, regardless of the type of drive unit. Determination of operating times with earthing on both sides. Three-phase dynamic resistance measurement on up to six main contact chambers per pole in combination with PROMET ohm meters. Control panel with 7" touch screen and two function keys. Inputs and outputs via 4 mm safety sockets and push-pull sockets located on the front panel. The system also features an internal memory with a storage capacity of 4 GB.

Control outputs

Electronic switching outputs (IGBT) for single or three-phase control of the closing and opening coils. All operating sequences can be configured and output in increments of 1 ms.
